(Continued from page one)

able increase as soon as the mines are on a profitable basis. They will also take some shares of stock in the company in part payment for their services.

General Plan of Operations.

"Mining Operations.—Mining operations are now under way, the plan being to get as much ore blocked out ready for stoping as possible by the time the mill is ready for operation. The highest grade ore in sight will be attacked with a view to turning out an average of not less than five per cent copper content for concentration. Later on, as soon as returns are received from the sale of products, a scientific and thorough exploration of the properties will be made by diamond drilling with a view to fully disclosing the nature and extent of our ore bodies.

"Concentrating Plant.—I have just closed an agreement with the Mineral Separation American Syndicate, Ltd., for the construction of an oil flotation concentrating plant at actual cost plus an allowance of \$250 per month for supervision. Preliminary work has already begun and will be rushed as fast as possible consistent with economy and efficiency. I expect the plant to be in operation not later than the first of November and possibly a month earlier.

"These are the parties with whom I negotiated last year and who have installed nearly all of the modern flotation plants the world over. They have a competitor in the field here, however, against whom they brought an unsuccessful suit for infringement of patents. By using this competitor against them I have succeeded in reducing their royalties over one half and in securing other valuable concessions from the terms of their agreement, which will save the company at least \$10,000 per year on its present contemplated output. Their superintendent will act as our consulting engineer free of charge and should they give better terms in the future to any one else we will have the benefit of the same. We will also be privileged to use any other metallurgical process without the payment of royalty if it does not infringe on their patents. There can be no danger of any infringement suits, as they are the originators of the art, but they agree to furnish ample security against any suit which might possibly be instituted. On the whole I consider the arrangement quite satisfactory. It is not unlikely that we will be able to use the smelter already erected on some of our ores at a later date.

"Our original plans were based on a plant of from 100 to 150 tons per day capacity, roughly estimated to cost \$42,500.00. I now find we can increase the capacity to a maximum of 225 tons per day at a small increase of cost, and this will be done. As soon as we secure lowest quotations on all of the equipment, a careful estimate will be compiled, copy of which I will submit in my next report."

DANCE AT YOUNG HOTEL THIS EVENING

The management of the Young Hotel invites tourists, local army and navy and society folk to a dance to be given this evening on the Roof Garden of the Hotel, beginning at 9 o'clock.—advertisement.

WILLETT & GRAY'S JOURNAL IN COMMENT ON SUGAR SITUATION

Willett & Gray's Sugar Journal for May 14 says:

Statistics by special cables.—Cuba—the six principal ports:—Receipts, 61,900 tons; exports, 32,000; stock, 638,000 tons, against 587,000 tons last year.

Centrals grinding, 123 against 144 last week, 155 last year and 154 in 1912.

Entire island receipts for week, 95,000 tons against 94,000 tons last week, 99,000 tons last year and 73,000 tons in 1912.

Stocks in the United States and Cuba together of 1,097,602 tons against 1,071,282 tons last week and 1,091,960 tons last year, an increase of 92,642 tons from last year.

Europe—Stock in Europe, 2,763,000 tons against 2,783,000 tons last year.

Visible Supply.—Total stock of Europe and America, 3,860,602 tons against 3,787,960 tons last year at the same uneven dates. The increase of stock is 72,642 tons against an increase of 121,892 tons last week. Total stocks and afloats together show a visible supply of 4,095,602 tons against 4,018,960 tons last year, or an increase of 76,642 tons.

Raws.—The strength of the raw sugar market noted for the preceding week has been continued during the week under review, and with increased activity in sales.

Under this strength and activity the quotation for 96 degrees Centrifu-gals has risen from 3.14c lb. duty paid, to 3.20c lb., an advance of 1.16c per lb.

There is a corresponding rise in the cost and freight basis from 2.15c to 2.31c per lb. for May and June shipments, while 2.14c per lb. & 2.1 was paid by operators for June shipments, equal to 3.25c per lb. duty paid, and 2.93c c. & f. (3.29) for early July and 2.51c c. & f. (3.32) for late July.

European markets also changed from former long dullness and weakness to increased strength and activity. In sympathy with our markets, but with only a moderate actual advance for the week in beet sugar of 1/4d. for May and June deliveries, closing firm, with buyers at quotations for May 9s. 4 1/2d., June 9s. 5 1/2d. and August 9s. 7 1/2d.

Cane, 96 degrees test, shows a larger rise, from 9s. 10 1/2d. to 10s. 2d., because of the advance in Cuba and the United States.

The Cuba crop news, which is the controlling factor of the situation, is rather favorable for price improvement, although another factor in this direction is the firmer attitude of refiners in regard to sales of their production and the good support given by the country in more satisfactory orders for refined.

The Tuesday weekly cable from Cuba gave a reduction in Centrals working from 144 the previous week to 123, and this number is further reduced by our Monday's cable to 112 Centrals working.

Our today's cable message is important as giving the first information that the rainy season has now commenced in the western provinces of Cuba, which corresponds nearly with the rainy weather of last year.

To island receipts thus far indicate a full crop, about as estimated.

The exports from Cuba of the present crop to May 1, as given herewith, exceed the exports to same time last year by 122,558 tons, and include 232,041 tons to countries other than the United States, against such exports to same time last year of 59,692 tons. These larger exports strengthen the conditions of the Cuban planters in the sale of their remaining productions.

It is worthy of note that after May 1, 1913, the outside exports were 257,342 tons on a basis of cost below the present which may lead to smaller exports after this time this year unless European markets make sufficient advances in cane sugar quotations to warrant imports on a rising basis.

This foreign demand versus the United States demand is an important feature to watch as the Cuba crop season draws near to its close.

There have been sales of Cubas to the United Kingdom this week at 2.09c per lb. f. o. b. Cuba, and the exports, as reported by Mr. Himley, 10,000 tons.

Our Java messages give crop exports for April all going to the east. This Java crop, beginning May, 1914, showed no exports to United Kingdom or the United States, against large exports thence in some former years.

The absence of Java sugar for the United States has been largely replaced by the yearly increase in the Cuba crop. The United States faces just now, as a result of the tariff legislation, a condition that may call for largely increased Cuba crops during the coming years 1915 and 1916, to replace possible deficiencies of our present free-duty crops which face free sugar effects in May, 1916.

Under present outlook the United States cannot look with equanimity on increasing exports to foreign countries from the Cuban crops. Such exports might eventually put refiners back to the necessity of purchasing foreign sugars at the world's price, from which they have been exempt in 1913 and 1914 to present time.

The whole sugar situation, as it may develop during the remainder of this year and in 1915, is full of possibilities which require careful study and observation all the time.

We give herewith abstracts from the annual report of the American Beet Sugar Co. showing the unsatisfactory results owing to the prevailing low prices for refined sugar. The factory cost was reduced to 3.30c per lb. but owing to the competition among refined sugar producers, the refined product during 1913 ruled low-

er relatively than the raw sugar values. There is some improvement in this respect noticeable under the new duty.

A government investigation of the domestic beet sugar industry in its relations to tariff conditions is now being conducted in every beet sugar producing state, which may lead to the rescinding of the free duty clause in the tariff, to take effect May 1, 1916.

Atlantic port receipts for the week were small, 41,860 tons, and less than meltings, so that stocks decreased 10,140 tons.

At the close the market is strong, with holders generally asking 2 1/4 c. & f. (3.26c) for May shipment, with a few small lots probably obtainable at 2 7/32 c. & f. (3.23c). A sale is reported to outports at 2 7/32 c. & f. (3.23c).

Annual Report American Beet Sugar Company, 1913-1914.—Following are extracts from the annual report of directors, dated New York, April 30, 1914, for the fiscal year ended March 31, 1914:

Income Statement: Receipts, \$8,210,373.73; expenses, \$7,566,269.08; earnings \$644,105.65; preferred dividends \$300,000; appropriations for improvements \$193,030.33; total \$492,030.33; surplus applied to working capital \$152,074.32.

The capacity of Oxnard and Chino and Rocky Ford has been increased, respectively, from 2000 tons of beets per day to 3000 tons per day; from 700 to 900 tons; and from 1000 to 1600 tons.

Oxnard, Chino, Rocky Ford and Grand Island factories were operated, while Las Animas and Lamar were closed.

There were produced in the campaign 1,512,282 bags of sugar, an increase over 1912-13 of 153,119 bags.

There were brought over from the last campaign 535,283 bags of sugar, compared with 134,265 bags from 1911-12.

There were sold during this year 1,833,901 bags, as against 1,370,425 bags last year, and there are carried over into the next campaign 511,644 bags.

Beets in California were inferior in sugar content and purity to those of last year, and yielded but 338.50 pounds of sugar per ton, as against 356.17 pounds in 1912-1913. In Colorado the yield was 292.57 pounds of sugar to the ton, compared with 278.71 pounds average the previous three years.

The cost of sugar sold, including freight and all other selling expenses, has been \$4.15 per 100 pounds, compared with \$4.28 last year, and the net earnings, including sales of pulp and miscellaneous products, have been 35 cents per bag of 100 pounds, compared with 1912-1913 profit of 62 cents per bag. The factory cost averaged \$3.50.

Beet acreage for 1914-1915.—There is a falling off compared with that contracted last year of 19.65 per cent. Part of this decline is due to the company's refusal to contract for some lands which produced inferior beets last year, and part of it because of the dissatisfaction of some growers with the reduced price to be paid for beets.

Earnest effort was made by some of the beet growers' associations to get all farmers to refuse the new prices, but their meager success indicates that all dissatisfaction will disappear by another year.

In California the price to be paid is 75 cents per ton less than that paid last year, but on the same basis as paid in 1911-12 and previous years. With the average yield of sugar per ton of beets for the last five years, 330.67 pounds per ton, this reduction will amount to 22 cents per bag of sugar of 100 pounds.

A new scale of prices has been adopted in Colorado, and the giving of wet pulp to the farmers of 20 per cent of their best tonnage has been discontinued.

These changes are estimated, with the normal average of beets, to amount to about 35 cents per bag reduction in the cost of sugar.

In Nebraska no change has been made, and none seems practicable, and with a prospect of the continuation of the present sugar market, that factory should be closed after the next campaign.

Of the cost of refined beet sugar, beets in the field cost 62.78 per cent, and plus cost to the factory, 4.56, the total cost of beets, 67.34. The cost of beet sugar, refined, is 20.69 per cent.

It is doubtful if the cost of refined items can be reduced, unless that of beets, but a further reduction in their cost is improbable unless agricultural labor and land values decline.

Kansas City, Mo.—(By Night Telegraph)—May 13, 1914.—California-Hawaiian cane granulated not advanced from 3.90c New Orleans basis. Western beet granulated not advanced from 3.80c New Orleans basis. Trade buying heavy. These prices will probably be advanced five points at opening tomorrow.

Kansas City, Mo.—(By Telegraph)—May 14, 1914.—California-Hawaiian bags, cane now 3.95c, New Orleans basis. Western beet 3.85c.

Denver, Colo.—(By telegraph)—May 14, 1914.—All grades of sugar advanced five points; cane now 4.56c, less 2 per cent.

San Francisco, Cal.—(By Telegraph)—May 14, 1914.—California-Hawaiian and Western advanced all grades 5 points.

Quote: California-Hawaiian and Western cane 4.20c, Beet 4.00c, less 2 per cent.

Cuba Crop.—Special cable received by us from Messrs. Guma-Mejor, Ha-

A tourist passing thru said: "Why, d'y'know, they're even selling ALFRED BENJAMIN suits in Lunnon now and the Bond street tailors are frightfully angry, old chap!"

LITTLE INTERVIEWS

—E. A. C. LONG: Politics is a hard game. If you run for office, are elected, and then can't help your friends, some of them turn on you.

—W. A. LOVE: I was greatly pleased yesterday when a gentleman came into my office with a voluntary contribution of \$50 for the Honolulu Symphony Society. He appreciated the work the society is doing. Such things more than repay us for the labor of preparing for such a concert as that given the other night.

DAILY REMINDERS

The Metropolitan Meat Market will close at noon on Saturday; there will be but one delivery.—advertisement.

There has been filed in the first circuit court a motion to strike from the files of the court an order of Abate, Jr., in the case of Macfarlane v. Abate, Jr., by his attorney, J. J. Andrews, makes the motion, and also asks for judgment by default. The matter will be presented before Judge Robinson on June 1 at 2 p. m.

SUPERVISORS FAIL TO ACT IN CHARITIES' CAUSE

A communication from the Associated Charities, stating that after the end of June it would not continue its present policy in general charity work was read at the noon meeting of the board of supervisors today.

The communication stated that with the change in policy, all persons requiring charitable assistance must bring a certificate from the mayor, stating that they are in need of such assistance.

"I move," stated Supervisor McClellan, "that this communication be tabled and that no action whatever be taken on it by this board."

The motion passed.

WELLESLEY GIRLS PLAN DANCE TO REPLACE BUILDING

With a view to securing funds to assist in replacing the building known as College Hall, Wellesley College, which was destroyed by fire early this month, the members of the local alumni association of that institution are arranging a dance which will be given in the National Guard armory on the evening of June 2, commencing at 8 o'clock. "College Capers" is the name which has been given to the affair, and residents of Honolulu are invited to be present and trip the light fantastic.

The spirit and courage of the Wellesley girls was brought out when, the time of the fire, many of the students' lives were saved by their efforts; the well-learned fire drill presented a panic as the great building burned and many of the students, eager were they to help their classmates, that they lost all of their own possessions. As a result, the Wellesley girls are glad that they are counting dollars, not lives, and it is the idea of the local alumni association to help raise money to replace the historic old college hall.
